

VERITAS FORENSIC DOSSIER

Multimodal Synthetic Media & Deepfake Verification Report

OVERALL VERDICT:	SUSPICIOUS / INCONCLUSIVE (37.8%)
Analysis ID:	86ad1eef-abea-4f87-b64c-3c2a2515855e
Target File:	synthetic_audio.wav
Media Modality:	AUDIO
Date of Evaluation:	2026-09-11 05:01:07 UTC

1. Modality Confidence Metrics

Modality	Assessed Score (0.0 - 1.0)	Risk Classification	Model Version
Visual (Video/Face)	N/A	Low Risk / Natural	ResNet-GradCAM-v2.1
Audio (Voice/Spectrogram)	0.378	Suspicious	SpectralFlux-VocoderNet-v1.4
Text (NLP/Perplexity)	N/A	Low Risk / Natural	Perplexity-Burstiness-v1.8

2. Forensic Rationale & Key Evidence

FORENSIC ASSESSMENT: SUSPICIOUS / INCONCLUSIVE (Risk Confidence: 37.8%).
Mixed indicators detected. Compression artifacts or borderline generative patterns warrant manual inspection.
Key Evidentiary Findings:

- Acoustic spectrum shows natural human vocal jitter and ambient room noise floor

Disclaimer: VERITAS AI generates probabilistic forensic assessments using spatial, acoustic, and statistical heuristics. Results should be corroborated with chain-of-custody metadata in formal legal proceedings.
